

Having successfully graduated from the institutes (my wife with the Honourous Diploma and Diploma of Candidate of Chemical Sciences) and being naturally hard-working and efficient, we rushed to embody the planned. We did not suspect, that it was a fraud! Actually, the authorities gave us possibility to show ourselves and then began to exterminate those, who succeeded. There were a lot of examples!

Our parents told us: "You are happy, you will not be afraid of arrests and labor camps!" They were right; the concentration camps were not necessary now. The new atrocious weapon was ready, the weapon for quiet extermination of undesirable persons, and the special programs were created.

One of such programs, according to Colonel Kanatjan Alibekov, was named as "Flute" ("Fleyta"). The Third Directorate of the Soviet Ministry of Health, Medstatistika and other institutions and departments took part in it. The principal aim of the program was to develop psychotropic and neurotropic biological agents for use by the KGB in special operations - including the "wet work" of political assassinations. See: Exhibit 1, Ken Alibek and Stephen Handelman, "Biohazard", Random House, 1999, pp. 170-172. The other program, "Bonfire", was devoted for creation of the principally new class of toxins and bioregulators and was destined for the KGB in order to use against the citizens of it's own country. Id p. 154, 164, 261.

Since the end of 1949 the KGB received "Carte-blanche" for persecutions of undesirable persons. Intelligentsia felt frightened. Murders and strange deaths
